The majestic monument Biodiversity Park, built in Gachibowli, MehdiPatnam Road, has become a benchmark in Hyderabad as an artistic expression that represents the great mystery of life on earth and its creation. Architecturally, describes the solid forms, liquid and gaseous.

Odyssey was invited to work on this prestigious project of Genesis Planners Private Limited, a renowned architectural firm based in Hyderabad. This huge undertaking required the acquisition, sawing and polishing processing 165 tons of stone in Udaipur and Noida facilities and onward shipment for installation in Hyderabad.

The memorial includes an elliptical tower 32 feet high representing the evolution of species, from an atom evolves into molecules and proteins, constituting the human being and the various forms of life on Earth. The base of the tower is made up of concentric circles representing the five elements of nature: Earth (Prithivi), Air (Vayu), Water (Jala), Fire (Agni) and Ether (Akasha).

Air ring
is the outer ring with a diameter of 108 feet represented by 12 trees. The number 12 has been reached by multiplying the cardinal points by the 3 types of wind. The 12 stands along the ring representing the 12 hours a day. Bordering the ladder on polished black granite are engraved the names of 193 countries.

Earth Ring
The park has recorded a 191 tour rankings of the Tree of Life. The circumference of the track is 224 meters while its width is 6 meters and has been symbolically provided with human height. The track has a black granite surface with an antique finish which are recorded in 2 mm depth of the 191 species names.

Fire
Fire is symbolized by the Sun, with lines radiating the colors of fire, composed of a black granite base with the sun's rays in red granite and yellow Jaisalmer stone.

Wall Mural
A wall descends transition between the Ring of Fire and the Ring of Water. This mural is divided into three areas representing the three

aspects of biodiversity: the system (Prakriti), the species (Prani) and structure (Antarlaya). 90 pieces were installed 30 mm thick Etah conical Gold Stone. These pieces were hand polished and etched with different finishes.		Bodegas
		Suburban Homes
Water Ring		Townhouses
The water bowl is the incubator of life, with a floating world map without political boundaries. The water jet technology is used to cut the shape of the world map in 30 mm thick stone.		Cinema video and multimedia
		Architects and designers
Ether ring		Designing jewelry and accessorie
The fifth element is represented as a structure with empty space between the fins. This structure is made on two levels. The upper level consists of 17 pieces engraved with 30 mm thick in Etah Gold Stone, while the base level is 25 pieces chipped and stacked 30 mm black granite.		Furniture Design
		Object Design
The pylon		Graphic Design
The majestic tower of 32 meters high with its elliptical structure itself represents the evolution of species from a single atom to the form of intelligent life. In the middle of the tower are representations of Dasa avatars. CNC milling is used to cut and bend the 21 pieces of 250 mm thickness of Etah Gold Stone, each of which has a weight of 1,200 kgs. The full story of the evolution of species was well recorded in these parts.		Industrial Design
