PROJECT DESCRIPTION:

Odyssey was awarded the Hardscape contract for The HYATT REGENCY in Pune. The principal architects Bilkey Linas De and Landscape architect Joel Burega envisioned a tropical for the external area of the Hotel. Odyssey was involved in stonework for various elements of the building including in landscape.

FAÇADE: 5000 SQM of Jaisalmer Flower Limestone in an a finish has been dry clad on the twin towers of the Hyatt Regency; one serving as service apartments and retail, w the second is a five star business hotel.

HARDSCAPE AND WATER FEATURES: The entrance drivewa cobbled in Black Granite & Yellow Jaisalmer hand-cut cobt 200 x 100 x 100 mm. A raised reflective water body is cla Tropical Green Granite, which is grooved and chipped to p a white water effect. Floating Lanterns on the reflective wa body have a solid stone spherical base and brass tops. T Green Granite sculptures of 1500 mm height and with a h gloss finish are placed in the alfresco dining area.

ARTWORK: Black Granite Arches are carved out of a singl block of 300 mm thick stone. These arches are propelled stainless steel rods and installed on 100 mm thick stone Lotus Pad Cut-Work Lattice is water-jet cut in 50 mm thid Granite and is flanked by 216 lotuses carved from spheric stones of 150 mm diameter and installed on brass stems either side of the lattice. We also did granite arches which carved out of a single block of 300 mm thick stone and tl arched were placed propelled on stainless steel rods and installed on 100 mm thick stone slab. Floating Lanterns c reflective water body have a solid stone spherical base ar brass tops. Tropical Green Granite Sculptures of 1500 mm height and with a high gloss finish are placed in the alfresc dining area.

Odyssey handed over the project within 14 months from t date it was awarded to them. The scope of work included façade, Hardscape, water feature and artwork. No, as such didn't face any obstacle during the project construction ph Maintaining the perfect level, and consistent water flow throughout, on all sides of the reflective water body was a challenge. The intent was to have very little movement of

on the surface of the water-body and have an even casca the rippled surface of the edges of the water-body.
